## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 3, and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Boss as in paper number as in the paper of June 30, 2003.

### ***Response to Arguments***

3. Applicant's arguments filed December 30, 2003 have been fully considered but they are not persuasive.

In response to the rejection under 35 U.S.C. 103(a), applicant argues that boss des not teach the claimed invention because the compartments are arranged on the side walls of the plates and because the conveying means is driven with a toothed gearing rather than a frictional drive arrangement. It should be noted however, that the above-discussed differences between the present invention and Boss are not claimed differences. Specifically, there is not claim language specifying the arrangement of the compartments other than that they are rotating about at least one axis of rotation and are formed by two opposed adjustable plates. Therefore, because Boss has compartments 4 that rotate about an axis of rotation 10 and that are formed by two adjustable plates 14 and 16 the compartments of Boss meet all the limitations required by the claims. Additionally, there is no language in the claims requiring that the drive of the conveying means be frictionally driven by a drive arrangement. The claims only require the drive comprises a

stationary roller path and a drive roller connected to the rollers and acted on by the roller path. It is recognized that the drive arrangement of Boss is different than the drive arrangement illustrated in Fig. 2 of the present application in that it utilizes toothed gearing between the drive roller 30a and the stationary and drive rollers. However, because Boss has a drive roller 30a (discussed in column 10, lines 16-54) acted on by a stationary roller path 28, Boss shows all the structure required by the claims.

*Allowable Subject Matter*

4. Claims 6-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

*Conclusion*

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
